### **Quaker Ridge Water Main Repair**

During the process of routine water main flushing in Quaker Ridge this morning, the Scarsdale Water Department crew encountered a control valve that malfunctioned due to its age and condition, resulting in a loss of water pressure to area water users, as well as a complete loss of water service to 12 homes located on Archer Lane between Stratton Road and Harvest Drive, as well as the Harvest Drive dead-end.

Water Department personnel have isolated the problem, and water pressure in the area is rebuilding, though the service interruptions to homes on Archer Lane and Harvest Drive will continue until the necessary repairs have been completed. Work is presently underway to replace the malfunctioning valve, and is anticipated to take up to seven hours to complete. Water Department personnel have placed notification door hangers on individual homes impacted by the service interruption.

Please note that water users in the area may experience discolored water, which does not present a public health concern. Once the work is completed, all faucets should be allowed to run until the water is clear. No boil advisory or warning is necessary at this time, as the integrity of the water main is intact.

The Village of Scarsdale is committed to upgrading its water and sewer infrastructure, and the 2017/18 [Capital Budget](#) incorporates funding to aggressively address related needs. The adopted 2017-18 budget can be viewed here: <https://tinyurl.com/Scarsdale-2017-18-Budget>.
